

Software Requirements Specification (SRS)

Enterprise Human Resource Management System (HRMS)

Version: 1.1

Prepared For: IGreen Technologies

Prepared By: Unitch Pvt Ltd

Document Type: Solution Overview & Functional Specification

1. Executive Summary

The proposed Enterprise HRMS is a centralized digital workforce management platform designed to automate organizational operations including identity management, employee lifecycle, attendance, payroll, incentive computation, and compliance reporting.

The solution is architected as a **multi-organization, rule-driven system** that converts operational data (attendance, tasks, leaves, loans) into **financial and management intelligence** (payroll, incentives, dashboards, and reports).

This platform will eliminate manual processes, reduce payroll errors, improve transparency, and provide real-time operational visibility to management.

2. Core Design Philosophy

The system is designed around five governing principles:

1. **Single Source of Truth:** All employee and payroll data originates from a centralized database.
 2. **Rule-Based Automation:** Incentives, payroll, leave, and deductions follow predefined policies instead of manual calculations.
 3. **Workflow Governance:** All sensitive actions (leave, loan, incentives, tasks) follow approval workflows.
 4. **Multi-Tenant Architecture:** Multiple organizations can operate independently within one platform.
 5. **Auditability & Compliance:** Every transaction is logged and reportable.
-

3. Functional Domain Architecture

3.1 Identity & Access Governance Layer

This layer controls **who can access what** and **under what authority**.

System Logic:

1. A user attempts login through:
 - Biometric device
 - Mobile application (OTP/token based)
 - Username/password
2. The system validates:
 - Identity
 - Role assignment
 - User-specific permissions
3. Access is granted based on:
 - Role Permission Matrix
 - User Permission Overrides
4. All login attempts are logged in the **Login History Table**.

Capabilities:

- Dynamic role creation (HR, Manager, Finance, Custom roles)
 - Permission assignment (CRUD control per module)
 - User-based permission override
 - Session management & logout control
-

3.2 Organizational & Configuration Engine

This layer defines **business structure and compliance rules**.

System Logic:

- Each organization has:
 - Its own currency
 - Its own tax rules
 - Its own departments
 - Its own designations
 - Its own leave policies
 - Its own payroll structure
- Data isolation is enforced between organizations.

Capabilities:

- Multi-organization creation & management
- Multi-currency and tax configuration

- Department and designation hierarchy mapping
 - Policy configuration per organization
-

3.3 Employee Lifecycle Management

This module manages the employee journey from pre-boarding to exit.

Pre-Boarding Logic:

1. HR generates a secure onboarding link.
2. Link is sent via SMS/Email.
3. Candidate enters:
 - Personal details
 - Documents
 - Bank information
4. Data is validated and stored for approval.

Onboarding Logic:

- HR converts candidate record into Employee Master profile.
 - System assigns:
 - Organization
 - Department
 - Role
 - Payroll structure
 - Leave policy
-

3.4 Attendance, Tracking & Performance Intelligence

Geo-Location Attendance Logic:

1. Employees log attendance via mobile app.
 2. GPS coordinates are captured.
 3. System validates:
 - Time
 - Location
 - Employee identity
 4. Data feeds into:
 - Attendance engine
 - Payroll calculation
 - Live tracking dashboard
-

Todo & Incentive Engine Logic:

1. Admin defines Todo tasks linked to incentives.
2. Employee completes task.
3. Manager verifies and approves task.
4. Approved task triggers incentive calculation.
5. Incentive amount flows automatically into payroll.

This creates a **Performance** → **Reward pipeline**.

Green Thanks (Recognition & Reward Engine)

The Green Thanks module functions as a structured employee recognition and reward system that links appreciation to measurable financial benefits.

Configuration Logic:

- Administrators shall configure **Green Thanks conversion rules**, including:
 - Number of Green Thanks points equivalent to a monetary value (example: 10 Green Thanks = ₹500).
 - Monthly or yearly maximum redemption limits.
 - Role-based or organization-based conversion policies.
-

3.5 Leave, Policy & Compliance Automation

Leave Policy Engine:

- Organization defines:
 - Leave types
 - Accrual rules
 - Carry forward rules
 - Holiday calendar

Leave Workflow Logic:

1. Employee submits leave request.
2. Manager reviews and approves/rejects.
3. System updates:
 - Leave balance
 - Attendance status

- Payroll deduction (if applicable)

This ensures **Loss of Pay (LOP)** is calculated automatically.

3.6 Financial Operations Engine (Payroll & Loans)

Payroll Logic:

Payroll is a calculated outcome of multiple inputs:

Payroll = Base Salary + Incentives – Taxes – Loans – LOP

Data sources:

- Attendance engine
- Leave engine
- Incentive engine
- Loan engine
- Payroll master rules

Processing Options:

- Bulk payroll generation
 - Single employee regeneration
 - Correction and reprocessing
-

Loan Lifecycle Logic:

1. Employee requests loan with tenure & interest.
 2. Manager/Finance approves or rejects.
 3. EMI is calculated automatically.
 4. EMI is deducted monthly from payroll.
 5. Notifications are sent on each stage.
-

3.7 Internal Communication & Collaboration Module

Internal Chat System

The HRMS shall include a secure, internal communication module designed exclusively for official employee interactions.

System Logic:

- Chat access is restricted strictly to active employees within the same organization.
- Communication is internal-only; no external users allowed.
- Messages are tied to employee identity and organization context.

Capabilities:

- One-to-one employee chat
 - Department-wise or role-based group chat
 - Attachment sharing (policy-controlled)
 - Chat access automatically revoked on employee exit
 - Message logs retained for audit (policy-based retention)
-

3.8 Performance, Recognition & Engagement Engine

Performance Rating System

The system shall support structured performance evaluations conducted by management.

Performance Logic:

- Monthly performance ratings assigned by authorized managers
- Ratings stored against employee profile
- Rating parameters configurable per organization

Business Impact:

- Performance ratings shall form the basis for:
 - Salary increments
 - Performance rewards
 - Career progression decisions

Recognition Integration

- Performance ratings can optionally integrate with:

- Incentive engine
 - Green Thanks reward conversion
-

3.9 Feedback, Compliance & Service Request Module

Feedback & Service Requests

Employees can raise structured service requests and feedback items.

Capabilities:

- HR requests
- IT/service requests
- Policy clarification requests
- Anonymous feedback (optional, organization-controlled)

Compliance Escalation

- Compliance-related issues can be escalated automatically
 - Multi-level escalation workflows supported
 - SLA tracking for resolution timelines
-

3.10 Ideology & Culture Module

This module defines and promotes organizational ideology and values.

Capabilities:

- Organization ideology statements
-

3.11 Insurance, PF & Statutory Configuration Module

Insurance Management

The system shall manage employee insurance policies.

Capabilities:

- Health insurance configuration
- Accidental insurance configuration
- Family member addition request workflow
- Approval-based policy enrollment
- Policy validity and coverage tracking

Statutory Compliance

- PF configuration per employee
 - ESI configuration per employee
 - Employer/employee contribution rules
 - Integration with payroll deductions
 - Statutory reports generation
-

4. Communication & Utility Services

Smart Notice Board:

- Scheduled company announcements
- Role-based visibility
- Push notifications

Reminder Engine:

- System-triggered reminders:
 - Deadlines
 - Birthdays
 - Anniversaries
 - Policy renewals
-

5. Reporting & Business Intelligence (BI)

Module	Report Name	Description
Finance	Payroll Month-wise	Detailed breakdown of earnings and deductions.
Operations	Attendance & Live Track	Visual map data and clock-in/out logs.
Performance	Todo & Incentive Report	Correlation between task completion and payouts.
Audit	Login & History	Security logs of user access and system changes.

Reports support:

- PDF export
 - Excel export
 - Date & organization filters
-

6. Role-Based Dashboards (Command Center)

Admin Dashboard:

- Total employees
- Pending approvals
- Live tracking map
- Loan & leave summaries
- Notifications & reminders

Employee Dashboard:

- Attendance status
- Leave balance
- Todo list

- Green thanks
 - Notices
-

7. Asset & Compliance Management

7.1 Company Asset Management

Asset Lifecycle Logic:

- Asset allocation to employees
- Asset type classification (Laptop, ID Card, SIM, etc.)
- Allocation date and condition tracking

Capabilities:

- Asset issue and assignment
 - Asset return status monitoring
 - Asset recovery status during exit
 - Asset history retained per employee
-

7.2 Disciplinary & Compliance Management

Disciplinary Workflow:

- Disciplinary incidents recorded through memo issuance
- Each memo recorded with:
 - Date
 - Reason
 - Issuing authority
 - Approval reference

Automatic Termination Rule:

- If an employee receives **five (5) disciplinary memos**, the system shall:
 - Automatically trigger termination workflow
 - Notify HR and management
 - Lock further system access

Audit & History:

- Complete disciplinary history retained
 - Memo records available for compliance and legal audit
-

8. Exit Management & Policies

8.1 Exit Initiation

Exit Types Supported:

- Resignation
- Termination
- Absconding

System Logic:

- Exit initiation by employee (resignation) or management (termination)
 - Notice period tracking and enforcement
 - Exit reason capture
-

8.2 Exit Clearance & Handover

Clearance Workflow:

- Department-wise No Objection Certificates (NOC)
- Asset handover verification

- Knowledge transfer completion checklist
 - Pending clearances block final settlement
-

8.3 Final Settlement Processing

Settlement Timeline:

- Final settlement processed within **45–90 working days**

Settlement Components:

- Salary dues
 - Gratuity (if applicable)
 - Recoveries and deductions
 - Loan closures
 - PF withdrawal or transfer processing
-

8.4 Exit Declarations & Access Control

Mandatory Exit Declarations:

Declarations shall be digitally accepted by the employee at offer acceptance and exit.

Declaration Clauses Include:

- In case of termination:
 - No experience letter
 - No relieving letter
 - No additional benefits
- In case of resignation with full notice served:
 - Salary and settlement processed within 45–90 working days
- Failure to serve notice period:
 - Salary and experience letter may be withheld

System Enforcement:

- Automatic login and access deactivation upon exit
 - Former employee records retained for:
 - Audit
 - Legal reference
 - Re-hiring eligibility
-

9. Non-Functional Requirements

Security

- Role-based access control
- Encrypted credentials
- SSL communication

Scalability

- Support multiple organizations
- High concurrent users

Availability

- 99.9% uptime for tracking and login

Performance

- Payroll processing within defined SLA
 - Fast report generation
-

10. Change Management & Scope Control

Once approved, this document serves as the **baseline requirement freeze**.

Any new features or modifications will follow:

- Change request submission
- Impact analysis
- Client approval

11. Client Acceptance

This document confirms the agreed scope of the HRMS solution.
